Breach Identification

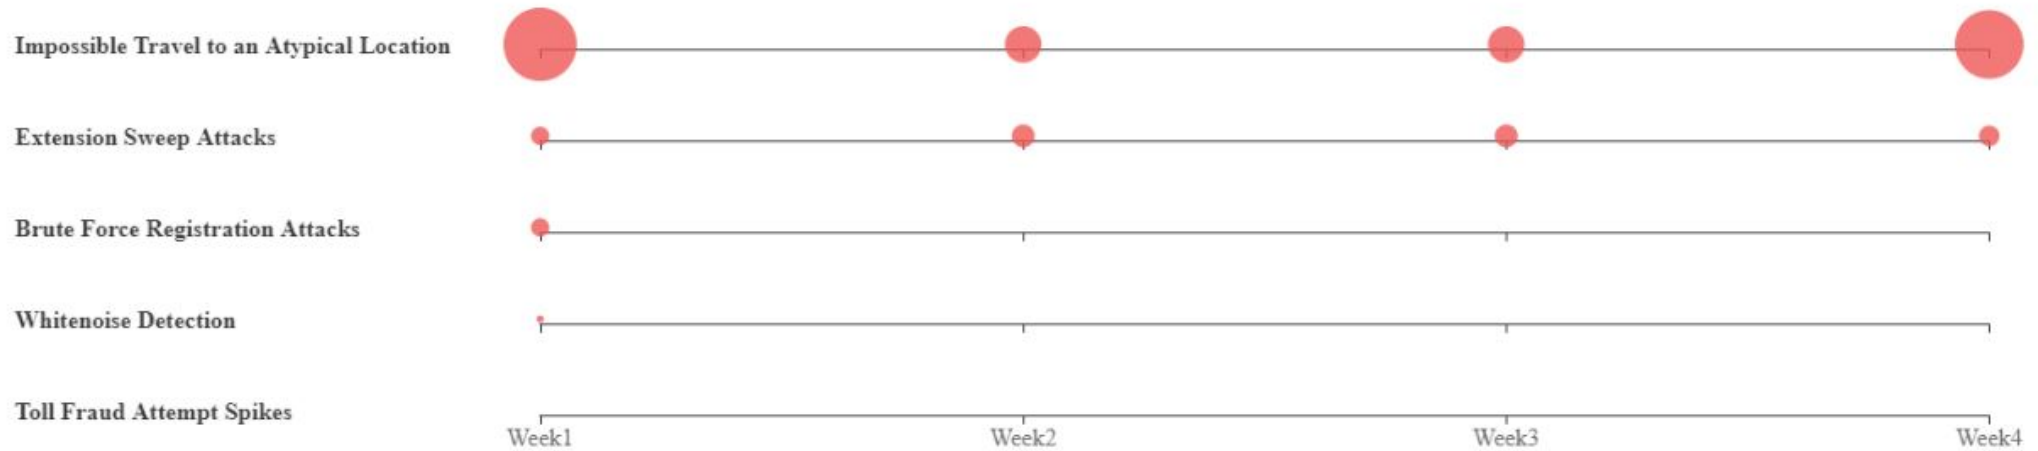

Get an in-depth view of all the breaches and their instances across different risk categories.

Security Policy	Risk Category	Instances	Impact/Fallout	Last Observed
Suspicious Endpoint Type Registrations	Remote Worker Security	49	Unauthorized access to enterprise service	12-Dec-2020
Registrations from Known Suspicious Subnets	Remote Worker Security	4	User impersonation leading to enterprise fraud	12-Dec-2020
Impossible Travel to an Atypical Location	Remote Worker Security	0	User impersonation leading to enterprise fraud	NA
Brute Force Registration Attacks	Remote Worker Security	0	Remote worked extension take over leading to frauds including toll fraud	NA

Attack Visibility

Know if you have been exposed to any major attacks across timelines and take quick actions to prevent an SBC breach.

7 Days 30 Days

Threat Origination

Drill down into the specifics of threats by knowing the exact geographies where threats have originated from

Cloud Posture

Be armed with the right knowledge regarding open ports, exposed unsecure services, weak ciphers and other areas

Ports and Services

4

Open ports

Number of ports open on the system

1

Unsecure Services

Number of unsecured services exposed

1

public IPs Scanned

Public IP addresses used by device

TLS / SSL security

A

Least Strength Cipher

Ciphers available with low strength

0

Broken / Deprecated Ciphers

Ciphers available which are broken or deprecated

TLSv1.2

Lowest TLS Version

Lowest supported TLS version

Configuration Issues

Get a holistic view around the major configuration holes to further zero-in on your sbc security strategy.

Dos/DDos Loopholes

Security loopholes to protect system against DoS

Admin Access Holes

Weak admin access issues found on the system

Reverse Proxy

Reverse proxy issues found on the system

Remote Worker

Remote worker security issues found on the system

Trunk gateway

Trunk security holes found in the system

Unpatched systems

Systems that are not on latest security patch
